

Web Development Lesson 1

Sunday, September 25, 2016 11:13 AM

Go over basic HTML items

Practice and try them in HTML editor and view in browsers:

- Tags, Attributes and Elements: The stuff that makes up HTML.
- Page Titles: Titles. For Pages. A difficult concept, we know...
- Paragraphs: Structuring your content with paragraphs.
- Headings: The six levels of headings.
- Lists: How to define ordered and unordered lists.
- Links: How to make links to other pages, and elsewhere.
- Images: Adding something a bit more than text...
- Tables: How to use tabular data.
- Forms: Text boxes and other user-input thingamajigs.

Home work:

Build a "AboutMe" HTML page with Title, Paragraphs, Lists, Links, Images.

Below is example, your page not need be same, just try to build yours with your own ideas.
